M1 - Overview

Introduction

In this module, we pick up where Biology 1 left off in the Evolution Unit and we start with early earth. In this unit we then move into classification of organisms (Ch 20) based on nutritional diversity, molecular and structural differences, and the environment we find them in.

Module Learning Objectives (MLOs)

The following MLOs support the **course learning objectives (https://fgc.instructure.com/courses/23434/pages/g60ad9781ab280f46d3fe2cc4158a5d66)** .
By the end of the module, you will be able to:

1. Identify the basic structures of a virus.
2. Explain the unique characteristics of viruses compared to living cells.
3. Describe the process of viral reproduction.
4. Identify structural features of prokaryotes.
5. Describe at least four ways in which the cells of prokaryotes differ from eukaryotic cells.
6. Identify the similarities and differences in the cell wall structure of Gram-positive and Gram-negative bacteria.
7. Identify three metabolic types of bacteria and describe how they obtain nutrients from their environments.
8. List the biochemical characteristics that distinguish archaea from bacteria and eukaryotes.
9. Describe three different types of archaea and the habitats in which they are found.

Module Topics

- Bacteria and archaea
- Viruses, Prions, Viroids
- Classification
