M4 - Overview

We start off exploring Nutriention and Transport

Module Topics

- Soil profiles
- Macronutrients and micronutrients requirements
- Transport through the plant

Module Learning Objectives (MLOs)

By the end of the module, you will be able to:

1. Identify the macronutrients and micronutrients that plants require
2. Explain a simplified soil profile
3. Choose the correct order of mineral uptake across the plasma membrane within a plant cell wall.
4. Describe the mutualistic relationships that assist plants in acquiring nutrients from the soil.
5. Explain how environmental factors influence the opening and closing of stomata.
6. Compare and contrast the xylem and phloem.
